

Digital Subscriber Line
and
Integrated Service Digital Network

DSL is faster Than ISDN

ISDN speed ranges between 64kbps to 128kbps

DSL ranges from 128kbps to 1.5mbps

ISDN is more expensive than DSL

DSL uses standard copper wiring already installed in businesses and homes

ISDN uses local copper wiring however it is special and needs to be installed

DSL is not as accessible

DSL suffers distance limitations as customers must be approximately 3 miles from an exchange point, this means that it is not capable of reaching everywhere.
